

VOGELER SEED CO.

MR. FARMER: Have you ever noticed how much better crops some people produce on their farms than do others; notwithstanding each gives the land and crops the same painstaking care?

Did you ever stop and think what was the cause? If you did you no doubt found that the seed planted was at fault.

GOOD SEED is the first requisite to success. Without this your efforts may be expended in vain, therefore see to it that the seed is right, that it comes from a responsible house.

For 16 years we have devoted our best efforts to the seed business and made it a special study, and our ever increasing trade is the best evidence that we have won the confidence of the people by supplying them with seeds of the best quality.

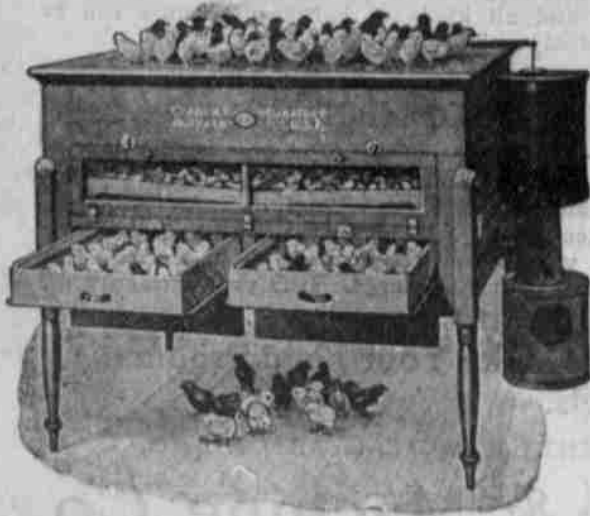

BROMUS INERMIS

Of all the varieties of cultivated grasses this can be considered the best and most promising for this part of the country. It is well adapted for hay and pasturage, produces a heavy yield, withstands extreme cold and as a drought resister has no equal. It will grow on all kinds of soil. Stock of all kinds eat it greedily, and it is very rich in flesh forming ingredients. *Bromus Inermis* should be tried by every farmer, and large tracts can just as safely be sown since the great value of it has been so well established. It is a grass which cannot be obtained too soon by all farmers.

CYPHERS and JUBILEE Incubators and Brooders

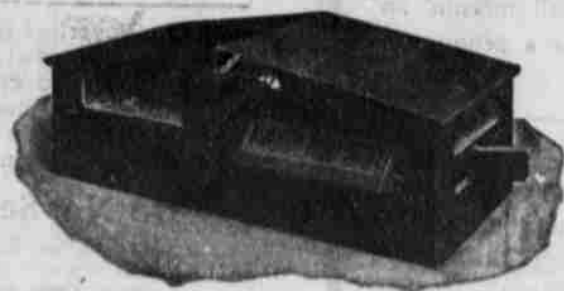

Are used by all up-to-date poultrymen, because they are the best. Now is the time to buy them, the hatching season is just ahead.

Chick Insurance

That's what our chick feed is. It is properly compounded to the needs of the growing chicks, and by feeding it you raise more strong, healthy chicks than from any other food on the market.
